- Southeast LA Veterans Health Care System

Shreveport

- LSU Health Shreveport

Our Theme:

From barriers to breakthroughs: innovative approaches to chronic disease management in Louisiana.

Cores:

The LA CaTS Center has a multi-faceted structure of expertise aimed at accelerating clinical & translational research by organizing its broad spectrum of specialized research services and infrastructure into CORES.

The LA CaTS Center is supported in part by the National Institutes of Health (NIH) -CTR program, grant U54 GM104940.

Clinical and Translational Research Through Partnerships

We help investigators, trainees, and communities

The LA CaTS Center is Louisiana's entry point for investigators looking for clinical and translational research resources, funding support and education; and for communities wanting to learn more about research and to get involved.

Our Goal:

To transform the clinical and translational research efforts of our region away from the status quo, where institutions operate in isolation to pursue their institutional missions, and toward a cohesive, mutually supportive enterprise for clinical and translational research.

Programs we support:

- Funding for promising clinical and translational research studies from the **Pilot Grants Program**
- A **Roadmap Scholar Program** that offers a masters level degree and mentored research
- Travel and learn a new skill through the **Visiting Scholar Program**
- Support for collaboration on a grant application in the **Grant Development Award Program**
- Support for building skills in implementing investigator-initiated trials in the **Short Experiences in Clinical Trials Program**
- A **Community Scholar Program** that supports partnership between the community and academic partners in research projects
- **Coordinator and Investigator Training Programs** (beginner to experienced)

Learn More:

www.LACaTS.org & sign up to receive announcements on funding & training opportunities.

Services we offer to the Louisiana Research Community:

- Biostatistics & epidemiology consultation
- Clinical trial units to see participants in Baton Rouge, New Orleans & Shreveport
- Regulatory knowledge guidance including IRB reliance platforms
- Consultation in community-based participatory research design and community input and involvement in studies
- Assistance in developing research and communication materials that are more understandable to our population
- Support for accessing data from clinical & health-related databases
- Database development for data collection through REDCap
- Various training and professional development tools and activities throughout the year
